FIFA TEST CRITERIA

Permanent Roundness (Sphericity)

The difference between the average radius and each individual radius is measured and must not exceed a certain percentage.

Minimal water absorption (Outdoor and beach soccer balls only)

Footballs are turned and squeezed 250 times in a tank full of water. The ball must not absorb too much water.

Balance: Minimal Change of Direction (futsal only)

Footballs are turned and squeezed 250 times in a tank full of water. The ball must not absorb too much water.

Consistent Circumference

Footballs are inflated to a defined pressure and then the ball's radius is measured at defined points.

Uniform rebound

Football are dropped ten times on to a plate from a height to two meters and must rebound consistently.

Perfect Weight

Footballs are turned and squeezed 250 times in a tank full of water. The ball must not absorb too much water.

Shape and size retention

The test ensures the ball's shape pressure and and circumference remain constant for the duration of a match and only applies for the top quality fifa APPROVED balls. The ball is fired 2,000 times against a steel plate at 50 kilometres per hour. The seams and air valves must remain undamaged and only minimal loss of pressure and changes in roundness and circumference are permitted.

To gain this top FIFA APPROVED Quality mark, a ball must pass all the 7 Rigorous Test under Demanding Conditions to ensure that Ball retains its Shape and Size for the duration of a Match. These Balls are made with the Top Japanese PU material.
